

DYNAUDIO HOME

Connect
Wireless transmitter

Listening to music has never been easier. The new Dynaudio Connect wireless transmitter brings a new level of connectivity and convenience to the second generation Dynaudio Xeo and the Dynaudio Focus XD models.

The Connect is based on the Dynaudio Hub, sharing its form factor and offering the same analogue and digital audio inputs including an USB input for computers, while adding Wi-Fi integration (Spotify Connect, DLNA) for the home network, Bluetooth connectivity (aptX®, AAC) for streaming from mobile devices such as smartphones, and 24 bit/192 kHz compatibil-

ity on the optical and coaxial digital audio inputs. When used together with the Focus XD, the Connect also is capable of lossless high-res streaming from the Connect to the speakers – with full 24 bit depth and up to 96 kHz sample rate high-resolution wireless audio transmission.

The Connect also allows one to operate the Xeo (second generation) or Focus XD models with the App Control for iOS instead of the Xeo or Focus XD remote control. The Dynaudio App is ideal to control either the Xeo or the Focus XD loudspeakers and the Connect, allowing users to select the audio

Dynaudio Connect streams multiple audio sources wirelessly to Dynaudio Xeo (second generation) and Dynaudio Focus XD.

Connect

Wireless transmitter

input, set the volume level, or power the speakers on and off. The App Control also features the added convenience of enabling the re-naming of the inputs, such as “CD Player” instead of Coax or “Flatscreen” instead of Opt, thus enabling a personalized level of customization and more simplified operation. The App also enables the Zones to be re-named when using the speakers in a multi-room setup, as Zone “Blue” may be re-named as “Guestroom”, for example.

With or without App, the Dynaudio Connect’s Wi-Fi integration with Spotify Connect and DLNA makes it easy to stream your

music completely wirelessly, for example from a DLNA player connected to your network, which streams music to the Xeo or Focus XD via the Connect. Smartphones or portable music devices can be wirelessly paired to the Dynaudio Connect via Bluetooth with A2DP, aptX® and AAC compatibility.

The Dynaudio Connect simply makes operating and listening to the Xeo (second gen) and Focus XD loudspeakers more convenient, versatile and easier than ever before.

Functions and Highlights:

- Analogue 3.5 mm Mini-jack-stereo input
- Analogue RCA-Stereo-Input
- Optical-Digital-Input (up to 24 bit/192 kHz)
- Coaxial-Digital-Input (up to 24 bit/192 kHz)
- Mini USB-Input (up to 24 bit/96 kHz)
- Bluetooth (A2DP, aptX®, AAC)
- WiFi (Spotify Connect, DLNA)
- App-control iOS
- ”High Resolution“-Mode for streaming one digital input up to 24 bit/96 kHz to the Focus XD
- ”Multiroom“-Mode for simultaneous streaming of inputs up to 16 bit/48 kHz to Xeo (second generation) and Focus XD
- External 5V-Power Supply included

Dimensions:

140 x 32 x 105 mm (5.5 x 1.3 x 4.0 inch)

All there is.
